
Table of Contents. Plato: Symposium, translated by B. Jowett. Phaedo, translated by B. Jowett. I. Kant: Prolegomena to every future, translated by C. J. Friedrich. Metaphysical foundations of morals, translated by C. J. Friedrich. Edition Notes. Includes bibliographies. Approximately six-sevenths of the book consists of readings in important documents of western European intellectual history. Somewhat more space has been allotted to the twentieth century than to the other periods, because of its contemporary interest. For anyone with an iota of imagination, this story should be immensely exciting. It tells of at least two major shifts in emphasis within the same culture over a span of seven- to eight-hundred years. It tells of the adventures of a host of intellectuals, of their unceasing efforts to advance knowledge and to explain, in the light of their milieu and the body of knowledge at their disposal, this mysterious universe, to solve the riddle of human existence, and to outline desirable and workable social objectives.
