Description:

Environmental Science: A Global Concern is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. As practicing scientists and educators, the Cunningham author team brings decades of experience in the classroom, in the practice of science, and in civic engagement. This experience helps give students a clear sense of what environmental science is and why it matters in this exciting, new 13th edition.

Environmental Science: A Global Concern provides readers with an up-to-date, introductory global view of essential themes in environmental science. The authors

balance evidence of serious environmental challenges with ideas about what we can do to overcome them. An entire chapter focuses on ecological restoration; one of the most important aspects of ecology today. Case studies in most chapters show examples of real progress, and “What Can You Do?” lists give students ideas for contributing to solutions.

Environmental science is the study of interactions among the physical, chemical, and biological components of the environment. It provides an integrated, quantitative, and interdisciplinary approach to the study of environmental systems. It includes such diverse areas as geology, agronomy, meteorology, atmospheric chemistry, soil chemistry, water chemistry, systems modeling, and biological responses of systems to anthropogenic influences. Environmental science, interdisciplinary academic field that draws on ecology, geology, meteorology, biology, chemistry, engineering, and physics to study environmental problems and human impacts on the environment. Learn more about environmental science in this article. Environmental science brings together the fields of ecology, biology, zoology, oceanography, atmospheric science, soil science, geology, chemistry and more in an interdisciplinary study of how natural and man-made processes interact with one another and ultimately affect the various biomes of Earth. Looking for a career in environmental science? EnvironmentalScience.org is the ultimate guide to everything you need to know about starting your career as an Environmental Scientist. Environmental science is the unified study of the Earth's natural processes, and the dynamic interplay between these processes and the complex societal needs of humankind. It is an inherently multidisciplinary field, one that is grounded in biology, chemistry, and physics, but that also encompasses quantitative and behavioral sciences, as well as aspects of anthropology, climatology, geology, meteorology, mineralogy, oceanography, and zoology. Environmental science is an interdisciplinary academic field that integrates physical, biological and information sciences (including ecology, biology, physics, chemistry, plant science, zoology, mineralogy, oceanography, limnology, soil science, geology and physical geography, and atmospheric science) to the study of the environment, and the solution of environmental problems. Environmental science emerged from the fields of natural history and medicine during the Enlightenment. Today it provides an

Environmental science and engineering are evolving endeavors. When public and scientific interests began to accelerate in the second half of the twentieth century, pollutants of any type and in any environmental compartment were addressed on a contaminant-by-contaminant control basis. Each law and regulation addressed a single compartment. Environmental science is the study of interactions among the physical, chemical, and biological components of the environment. Our journal covers all areas of Environmental Science and related subjects, with emphasis on chemical compounds. Through Springer Compact agreements, authors from participating institutions can publish Open Choice at no cost to the authors. We deliver high levels of author satisfaction, with 94% of our published authors reporting that they would definitely or probably publish with us again.
