
This book explores the large and diverse range of participatory methods currently in use, examines the problems and gaps in these methods and sets out an innovative new methodology which overcomes these shortcomings. Uniquely, this method builds from the assumption that it is not just the outputs that matter in participation - it is also the journey. Triple Task is designed to help groups explore their current situation and develop a path by which they can improve their functioning and ultimately make a positive contribution to the lives of others.

This book, written by two experienced and respected experts in stakeholder participation, left me with mixed feelings. However, the authors' ambitions go beyond proposing a new participatory research tool; their aim is to help all groups, including self-assembling ones, improve their resilience. The authors situate their efforts as a contribution to saving the Human Project; never clearly defined, the term seems to refer to the entirety of human activity across history and into the future. My research and scholarship focuses on participation and methodologies to promote it, including the role of information systems. The main methodologies developed through research are: Imagine, Multiview and Logical Framework. I am primarily interested in methods which help us to understand complex issues. This highly readable yet rigorous book sets about the methodical assessment of fear as an emergent property. Working from the personal experience of fear as aEveryman, and then using examples and case studies, it explores the main principles which lie behind the manifestation of fear of all kinds.
