MARKETING RESEARCH
Spring 2006

Professor: Kusum L. Ailawadi
Class Days: Mon, Tues
Office/Phone: Tuck 311, 62845
Class Time: 1.15 – 2.45
Assistant: Tammy Stebbins
Office Hrs: Mon, Tues
Office/Phone: Chase 308, 60796
Office Hrs: 10.00 – 12.00

COURSE OBJECTIVES:
This course is intended to make you a well-informed user of state-of-the-art marketing research. By “user”, I mean someone who can formulate and structure marketing problems, recommend the marketing research that should be undertaken, appreciate what can and cannot be learned from marketing research, gather and analyze quantitative marketing data, and make effective decisions based on those data. You will not become a methodological expert in this course but you will be able to design and conduct some important analyses yourself. The skills covered in this course are applicable to marketing problems encountered in both consumer and business-to-business markets, and public and private sectors. These skills are particularly useful if you plan to go into a consulting or marketing career.

Although the technical nature of the course will often require the use of a mini-lecture, the class sessions will mainly be discussions. My role will be to help you explore and understand the issues for the day by asking questions that you may not have asked yourself, and trying to answer those that you have raised but not been able to answer. Some of your notes from "Statistics for Managers" will come in handy, especially those on hypothesis testing and regression. So, dig them out!

COURSE REQUIREMENTS:
The course utilizes four tools: a textbook, selected cases and readings, homework assignments and, most importantly, two "hands-on" projects. You will need to use SPSS for Windows, Excel, and Sawtooth conjoint analysis software. The course requirements are described below in some detail.

1. Squid Project:
The research problem is to determine whether there is strong potential for a mass-marketed domestic seafood product made from squid. The project entails the analysis of data from a professionally administered survey as well as collection of secondary information. This is a major project designed to enhance your analysis skills. It requires you to conduct a detailed market analysis using sophisticated techniques, synthesize the findings from that analysis and couple them with creative thought to make a marketing decision. You will work in pairs on this project. It will culminate in a double-spaced, typed report of at most six pages (excluding charts and other appendices), due in the fifth week of the course, at the beginning of class on Monday, April 24th. There will be a grade penalty for exceeding the page limit.
2. **Squid Homework Assignments:**
   Three short homework assignments will be due on the 3rd, 11th, and 17th of April, respectively. These assignments relate to the squid project, and will involve interpreting cross-tabulations, factor analysis, regression, and discriminant analysis. You can hand these assignments in jointly with your partner on the squid project. The purpose of these homework assignments is to ensure that any confusion you might have in interpreting these analyses is cleared up before you use them in your final squid project report.

3. **Conjoint Project:**
   Working in teams of four students, you will develop and pretest a conjoint analysis survey on a topic of your own choosing. This will require the use of Sawtooth software and either EXCEL or SPSS. The final conjoint report will be due at or before 4.00 pm on Friday, May 26th. Further details on the conjoint project are provided in the course packet.

4. **Readings:**
   I have assigned readings from the text and some other sources for each class meeting. They provide necessary background for class discussion and the completion of assignments. Descriptions of some advanced analytical methods may be difficult to grasp fully at the first reading. Please skim those sections before class to acquaint yourself with the topic and then go back and work through the details after we discuss them in class.

5. **Cases:**
   We will discuss four cases that illustrate some of the Marketing Research concepts and techniques covered in the course. I expect you to come to class fully prepared with a comprehensive analysis of each case and your recommendations. Discussion questions for each case are included in the course packet.

6. **Class Participation:**
   The learning experience in any course depends, in large part, upon the quality of class discussion. Please read and give some thought to each day's assigned material and come to class with your notes properly organized, ready to participate in the discussion. Clearly, I do not expect you to always have the right answers when we are discussing a new analytical technique. Evidence that you have done the reading and absorbed it to the best of your ability is all I ask for. Remember that thoughtful questions leading to a rich class discussion are often as valuable as thoughtful answers.

   My expectations are different for the discussion of cases. You should be able to lead the case discussion with carefully thought through answers to the assigned discussion questions. These answers should be backed up by quantitative analysis where applicable. Please note that participation in case discussions will be weighted more heavily than other class sessions in determining your class participation grade.

Marketing Research
GRADING SCHEME:

Class Participation 20%  Squid Project 35%
Homework 10%  Conjoint Project 35%

HONOR CODE:
In general, group discussion is encouraged for class preparation and assignments, but, ultimately, any work to which you put your name must reflect your understanding of the material. The squid project has specific honor code instructions that are provided separately.

ATTENDANCE POLICY:
Much of the learning in this course will occur in class as we understand how to use some important marketing research techniques and as you share your analyses and questions with each other. Therefore, attendance at all class sessions is expected, and you cannot “make up” for class participation with written work. Except in an unforeseen emergency, I expect to be informed beforehand if you need to miss a class. Please note that missing more than two class sessions for unexcused reasons (i.e., reasons other than family emergency, illness, or religious observance) will entail a grade penalty over and above the direct impact on class participation.

REQUIRED MATERIAL:

1. Text:
   Title: Marketing Research: Methodological Foundations
   Authors: Gilbert A. Churchill and Dawn Iacobucci
   Edition: Ninth edition, 2005
   Publisher: Thomson South-Western Publishers.

2. Cases, Readings and Assignments:
   Included in course packet or will be distributed in class.

Conjoint final paper due to Tammy Stebbins in Chase 308 on Friday, May 26th, by 4.00 pm.
1. Introduction. In order to determine the philosophical foundations of research in marketing science, study will track following steps; In the first part, general perspectives in scientific research process will be analyzed (Holbrook, Morris and Shaughnessy, 1988; Hudson and Ozanne, 1988; Shankar and Goulding, 2001; Cova and Elliott, 2008). In this part, different methodological approaches in the literature are presented. Sobh and Perry (2005) and Guba and Lincoln (1994) divided research paradigms into three; ontology, epistemology and methodology. @inproceedings{Iacobucci1976MarketingRM, title={Marketing Research: Methodological Foundations}, author={Dawn Iacobucci and Gilbert A. Churchill}, year={1976} }. Dawn Iacobucci, Gilbert A. Churchill. Published 1976. Engineering. This market leader has established itself as a classic through seven previous editions by presenting superior, balanced coverage of both the qualitative and quantitative aspects of marketing research. The six stages of the research process provide a solid framework to ensure the development of students’ conceptual and practical understanding of marketing research.
