Here are 21 interesting facts about space for kids that will leave you mesmerised by the wonders of the universe.

1. The Largest Asteroid Is About 965 Km Wide. Ceres, the dwarf planet, was the first and biggest object ever to be deemed an asteroid. The fact is we don't know all the answers about it. We know it's vast and beautiful, but we're not really sure how vast (or how beautiful, for that matter). Some of the things we do know, however, are downright mind-boggling. Below, we've collected some of the most amazing facts about space, so when you look up at the stars you can be ever more wowed by what you're looking at.
1. Neutron stars can spin at a rate of 600 rotations per second. Image: FLICKR / NASA GODDARD SPACE FLIGHT CENTER. Neutron stars are one of the possible evolutionary end-points of high mass stars. They're born in a core collapse supernova. Add a gift receipt for easy returns. New & Used (38) from \$3.29 & FREE Shipping on orders over \$25.00. This is a good book, but not for babies or preschool children like it is categorized here. There are a lot of facts, and it will simply bore most children if they don't have a very, very, very strong interest in this subject. My 4 and 5 year old daughters said it was "boring" and didn't want me to finish however, I insisted we finish what we started and they constantly looked around the room and even sat on their hands trying to sit still until we did. Most of us have been filled with wonder at one point or another about space, which sadly begins to fade as we grow older and realize that there is so much we don't know and will never know. Luckily, there are those who never lost that enthusiasm for the cosmos and work hard to find answers. Here are 20 facts about space you should know.
1. According to astronauts who have returned from space missions, space smells like a mixture of hot metal, welding fumes and seared steak. Share. Share on Pinterest. Share on Facebook Share on Twitter. Image source.
2. There is a phenomenon that scientists call biz
