Description:

A good observer of nature, walking, say, in an oak forest, may discern that some of the acorns on which he or she is treading are broken into little bits. After reading wildlife interpreter and photographer Paul Rezendes's guidebook to animal signs, that same observer will be able to tell which of those acorns have been split by human footsteps and deer hooves and which have been gnawed apart by squirrels--and by what species of squirrel. A wonderfully thorough, well-illustrated compendium, Rezendes's text covers a wide range of North American animal species, including rodents, hoofed animals, bears, raccoons, opossums, and members of the weasel, rabbit, dog, and cat families. He describes not only the signs these animals leave but also their ways of life throughout the year, and with an appropriately environmentalist purpose. "Ultimately," Rezendes writes, "tracking an animal makes us sensitive to it--a bond is formed, an intimacy develops. We begin to realize that what is happening to the animals and to the planet is actually happening to us." He's right, of course, but one need not take

such a macrocosmic view of nature to take pleasure in, and learn from, this fine book. -
-Gregory McNamee

Review "Better than any other field guide to tracking I've seen." -- -- *Pittsburgh Post Gazette*

"Better than any other field guide to tracking I've seen." -- -- *Pittsburgh Post Gazette*

"If Thoreau's Concord neighbors led lives of quiet desperation, many people today rush through lives of frantic, noisy alienation. Paul Rezendes's book is about tracking, but also much more; it shows how to find your way home to the great web of life. For the woods walker, this book offers the key to a new kingdom." -- -- *The Boston Globe*

"Paul Rezendes's work reflects his commitment to living in concert with the planet and his breadth of knowledge and insight into animal tracks and sign. His book is a central resource to our environmental awareness program at Earthlands International." -- --
Larry Buell, Director, Earthlands International

"Rezendes has produced a fascinating book filled with beautiful color photographs and detailed illustrations. Hunter and hiker alike will find this book helps them to see the world of nature with a more knowing and appreciative eye." -- -- *Albuquerque Tribune*

"This book is a step beyond a guide to tracking. The illustrations and photographs are superb, another world beyond traditional guidebooks on the subject." -- -- *Spokane Review*

The Lost Art of Reading Nature's Signs: Use Outdoor Clues to Find Your Way, Predict the Weather, Locate Water, Track Animals and Other Forgotten Skills (Natural Navigation). Tristan Gooley. 4.6 out of 5 stars 3,930. It has range maps and great info on each species habits and habitats, which Tracking and the Art of Seeing lacks. Even if you're not planning to use trail cams, Camera Trapping Guide is extremely informative. The 2 books together are an awesome combo. I teach tracking, and this is the book I most often recommend to beginners. It is well organized, and contains most of the essential, basic information. This is one tracking book which can be read cover to cover, because the conversational style with personal accounts makes it most readable. Tracking & the Art of Seeing is a divinely helpful book. If you want to see more of the world around you, particularly the wildlife around you, then this is the book for you. Prepare to be inspired. I've read other books about tracking, but this one immediately transformed my experience -- I can't wait to read and study this book again. Far more than mere tracks, Paul Rezendes explores trail patterns, various middens, and many other signs. An absolute treasure. Far more than mere tracks, Paul Rezendes explores trail patterns, various middens, and many other signs. An absolute treasure. (Of course, some of the habitat information is a bit outdated now, but that's an easy adjustment for most readers.) ...more. 320 p. : 27 cm. This book will help anyone who is interested to re-enter the ancient dialogue between animals and humans, a dialogue which is at the core of a nondestructive way of being in nature. Illustrated with hundreds of his original photographs, this book provides complete information on the behavior and habitat of numerous animal species of North American wildlife and shows how to identify animals by their tracks, tail patterns, droppings, dens, scratches and other signs. Includes bibliographical references (p. 303-307) and index. Illustrated with hundreds of his original photographs, Tracking & the Art of Seeing provides complete information on the behavior and habitat of over 50 animal species and shows you how to identify animals by their tracks, tail patterns, droppings, dens, scratches and other signs. I've read other books about tracking, but this one immediately transformed my experience -- I can't wait to read and study this book again. Far more than mere tracks, Paul Rezendes explores trail patterns, various middens, and many other signs. An absolute treasure. The signs animals leave on the ground can be more revealing than any book written by man, but unfortunately few people are able to see these signs and fewer still can read them. To understand something of the behaviour of animals one must realise that the development of their senses is markedly different to mankind's, and therefore where we obtain information through our eyes and ears, one animal may obtain the same information through its sense of smell and another through its ability to detect temperature changes, or through vibrations.

Tracking is truly a way of thinking and a powerful tool for observation. It makes one a master of the art of questioning. Increase your tracking ability by learning from the great trackers of the world? The tools that you might need for tracking. Some of the tools in this section are optional and will not limit your ability to track an animal effectively. However, these tools will help you and make you more efficient at tracking.

1. Measuring tape. A measuring tape is used to measure the size of the footprint. It can be effortless to classify a specific species of animal if you know how to read their tracks. In this section, I will guide you through the process of how to identify an animal by studying their footprints. Let's start with the number of toes. a) The number of toes. Each species of animal will have the same type of framework or skeleton structure which will allow it to have the same distinct kind of walk. Let's start with diagonal walkers 320 p. : 27 cm.
