
2. Neolithic remains from the cave behind cemetery K -- pt. 3. A-group remains from cemeteries W, V, S, T, and Q -- pt. 4. Post-A-group remains at Adindan. Access-restricted-item. true. Addeddate. 2021-03-21 02:23:47. Associated-names. Seele, Keith C. (Keith Cedric), 1898-1971; International Campaign to Save the Monuments of Nubia. The size of cemetery and the scale of the archaeological data are unprecedented in South-east Asian Neolithic archaeology and offer a unique opportunity to investigate the cemetery's origins, development, and history in detail. A Post-Neolithic phase of possibly 14 burials (five primary flexed burials and nine secondary burials) is proposed to follow, which while continuing aspects of Neolithic mortuary behaviour, is considered on isotopic data to represent a group of hunter-gatherers living in a closed-canopy environment. Résumé. Prehistoric foragers and farmers in south-east Asia: renewed investigations at the Niah Cave, Sarawak. Proceedings of the Prehistoric Society 68, 147â€“164Google Scholar.
