Ecological literacy (also referred to as ecoliteracy) is the ability to understand the natural systems that make life on earth possible. To be ecoliterate means understanding the principles of organization of ecological communities (i.e. ecosystems) and using those principles for creating sustainable human communities. The term was coined by American educator David W. Orr and physicist Fritjof Capra in the 1990s – thereby a new value entered education; the "well-being of the earth". Ecological education, preschool, children, ecological literature for children. Abstract: This article describes a project proposal for education and research on. ecological (environmental) education of children. The Project connected with. literary ecological education is of interdisciplinary nature. It postulates research on. the application of contemporary children's literature to shape a conscious and. responsible explorer of the natural environment. The project's applicants associate. most effectively? Our research hypothesis assumes that children's literature including. environmental/ecological motifs can shape the ecological intelligence of preschool. children (cognitive components, sensitivity, empathy) due to the power of.
