Enlarge cover. asteroids, meteors, and comets. Titles in This Series. sherman. Throughout history, people on Earth have seen asteroids, meteors, and comets as they moved across the sky. This book takes a close look at asteroids, meteors, and comets, exploring their characteristics, their behavior, and how they affect Earth and our Solar System. Learn about new discoveries, innovative technologies, and incredible explorations that have given us many answers to our questions about outer space. A meteorite is made up of rocks, minerals, and metallic elements combined together in space. Because of their size and the amount of heat and energy created when they move through Earth's atmosphere, most meteors burn up and disintegrate before they hit the planet's surface. 24 pages : 19 cm. Presents general information about comets and asteroids, including what they are, what they are made of, and their relationship to the solar system. Includes bibliographical references (page 23) and index. Space rocks -- Dirty snowballs -- Here come Halley! -. - Let's rock! -. - Eros. Choose books together. Track your books.
